

Gaia launch time talk

André Moitinho de Almeida
(SIM - U. Lisbon)

on behalf of the national collaboration for the Gaia DPAC and
science exploration

Launch is comming

- Flight Acceptance Review completion 22 July authorising shipment to Kourou

- Launch preparations are being completed for

la

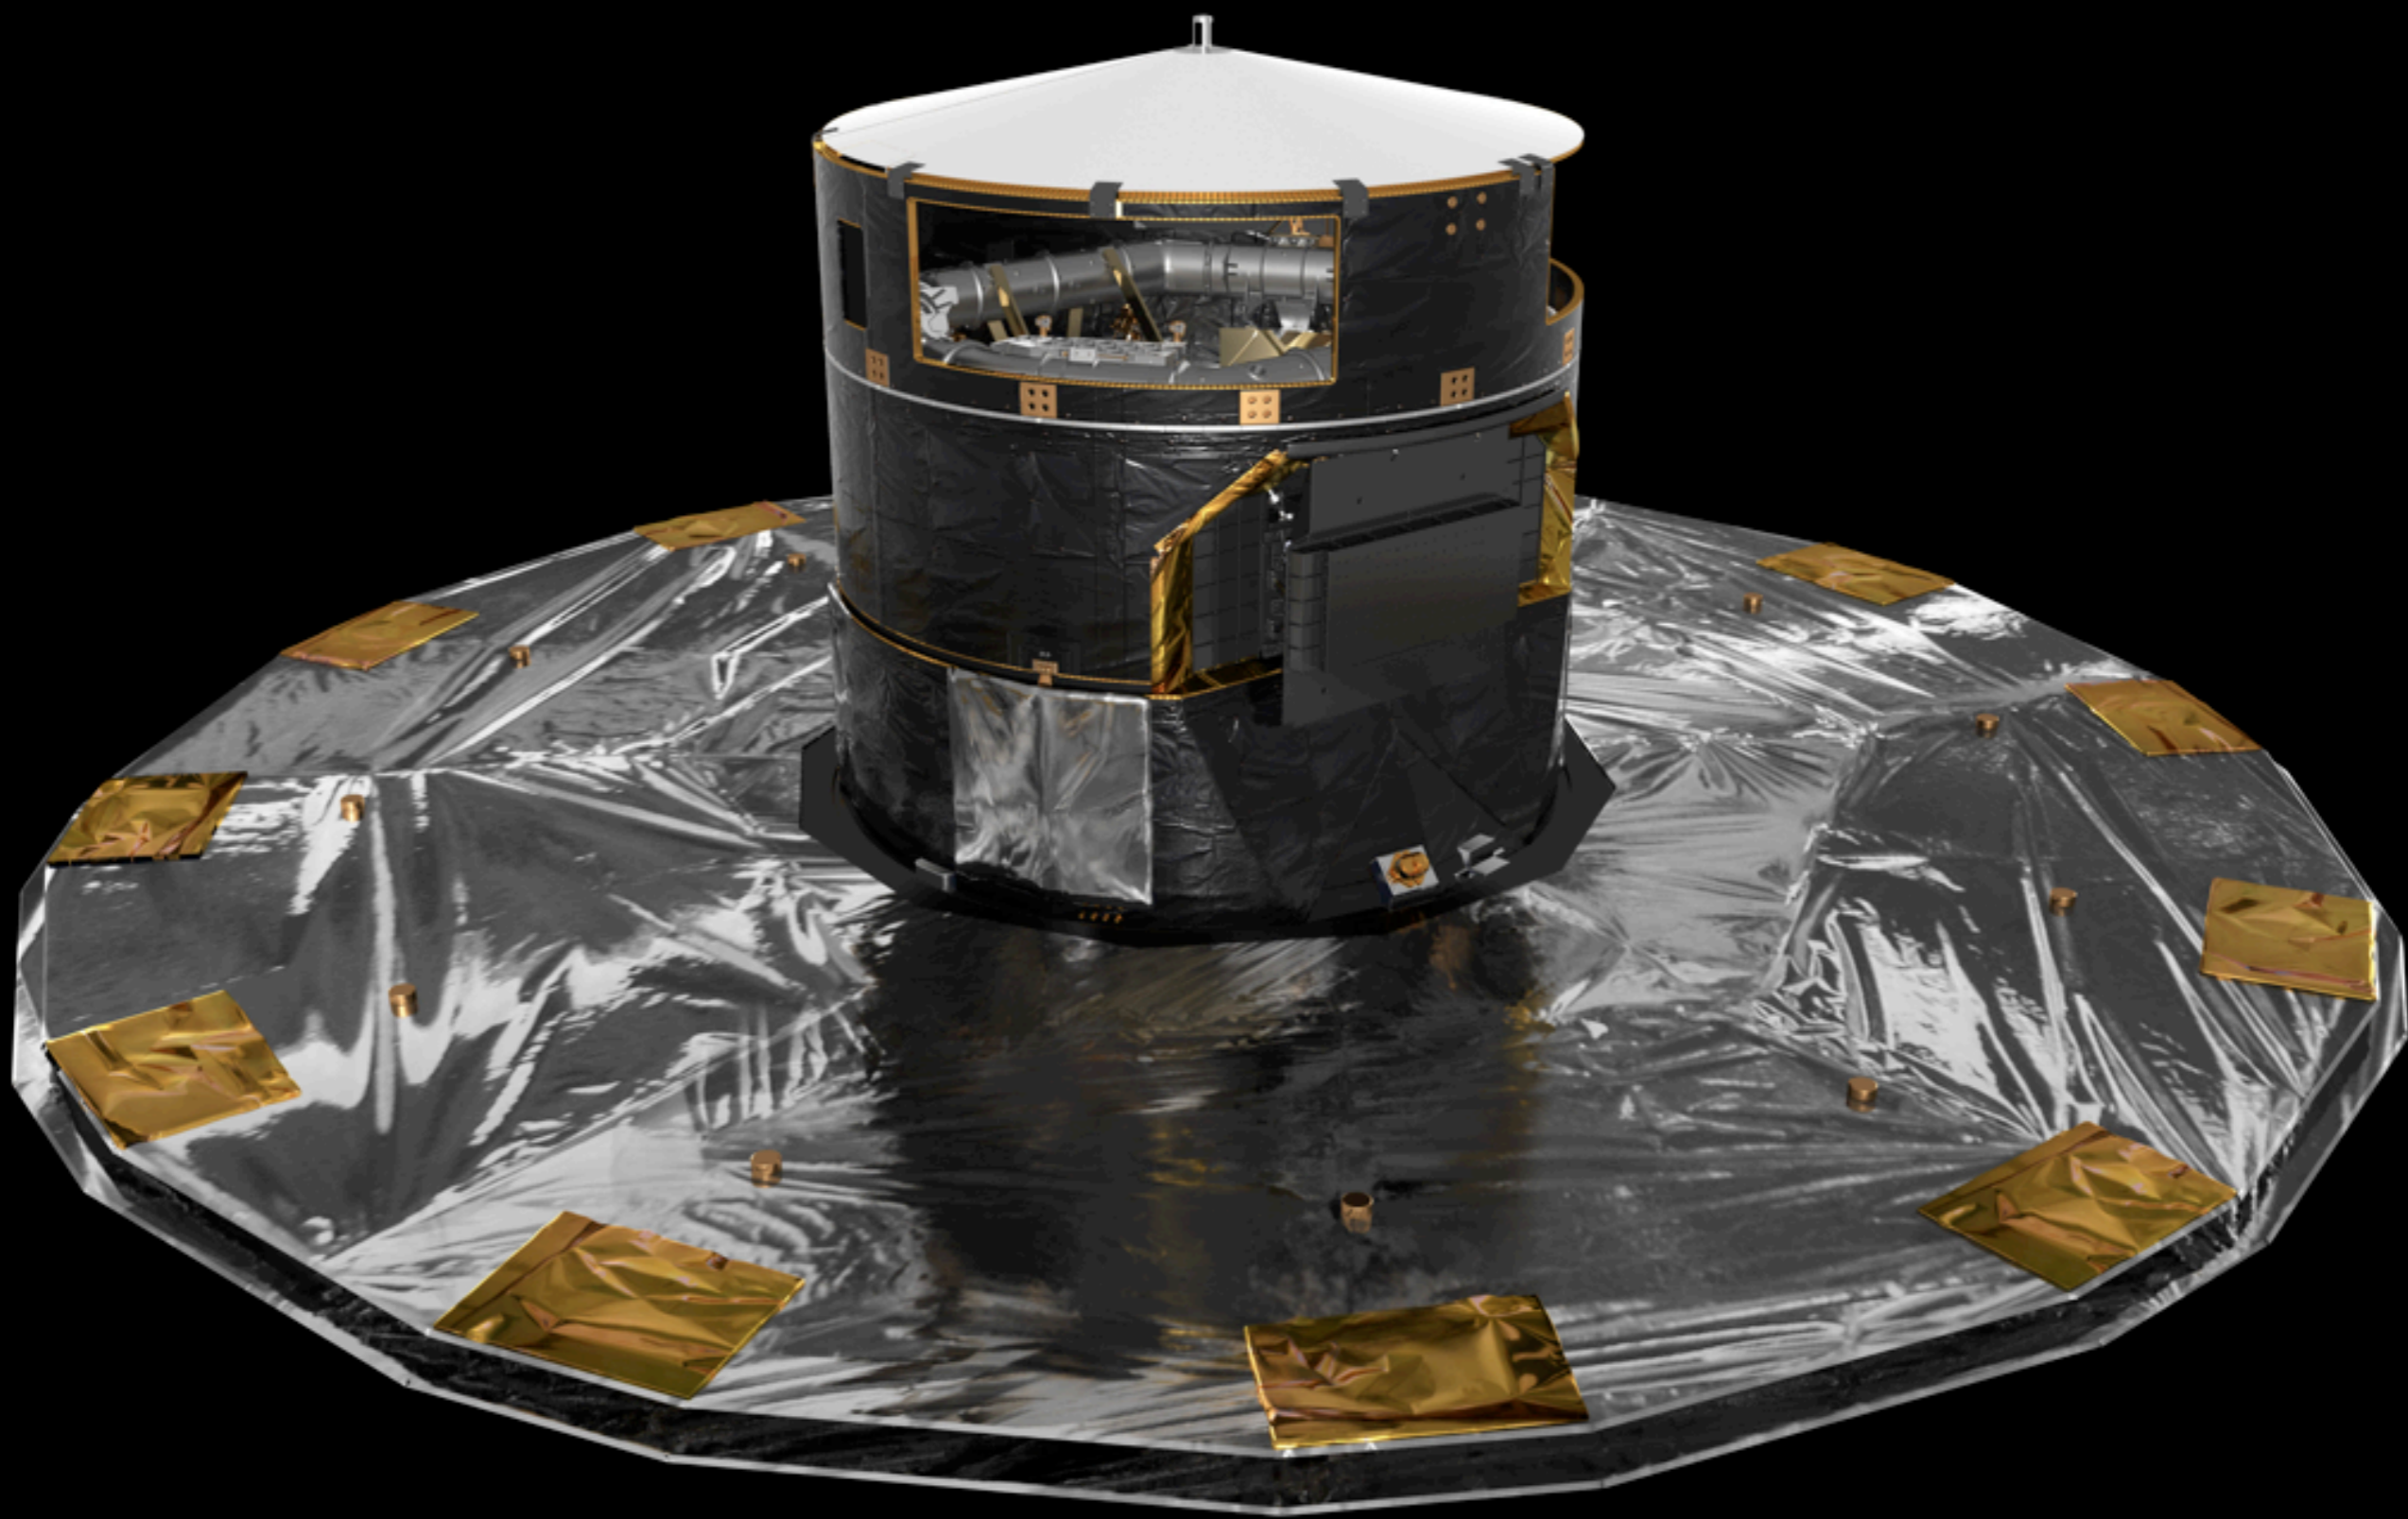

From: Timo Prusti <tprusti@rssd.esa.int>
Subject: [gaia-gst] launch
Date: 18 July 2013 10:08:25 AM GMT+02:00
To: Gaia Science Team <gaia-gst@rssd.esa.int>, dpace Executive <gaia-dpac-executive@rssd.esa.int>

Dear Colleagues,

Arianespace has allocated launch slot for Gaia in the window 17 November – 5 December. No formal decision from the higher ESA levels yet, but Giuseppe has cancelled the Antonov transport in August and Gaia s/c is now going to Kourou 4/5 September. Yet another unwanted one month delay (not caused by Gaia), but at least we have now a slot.

Regards,
Timo

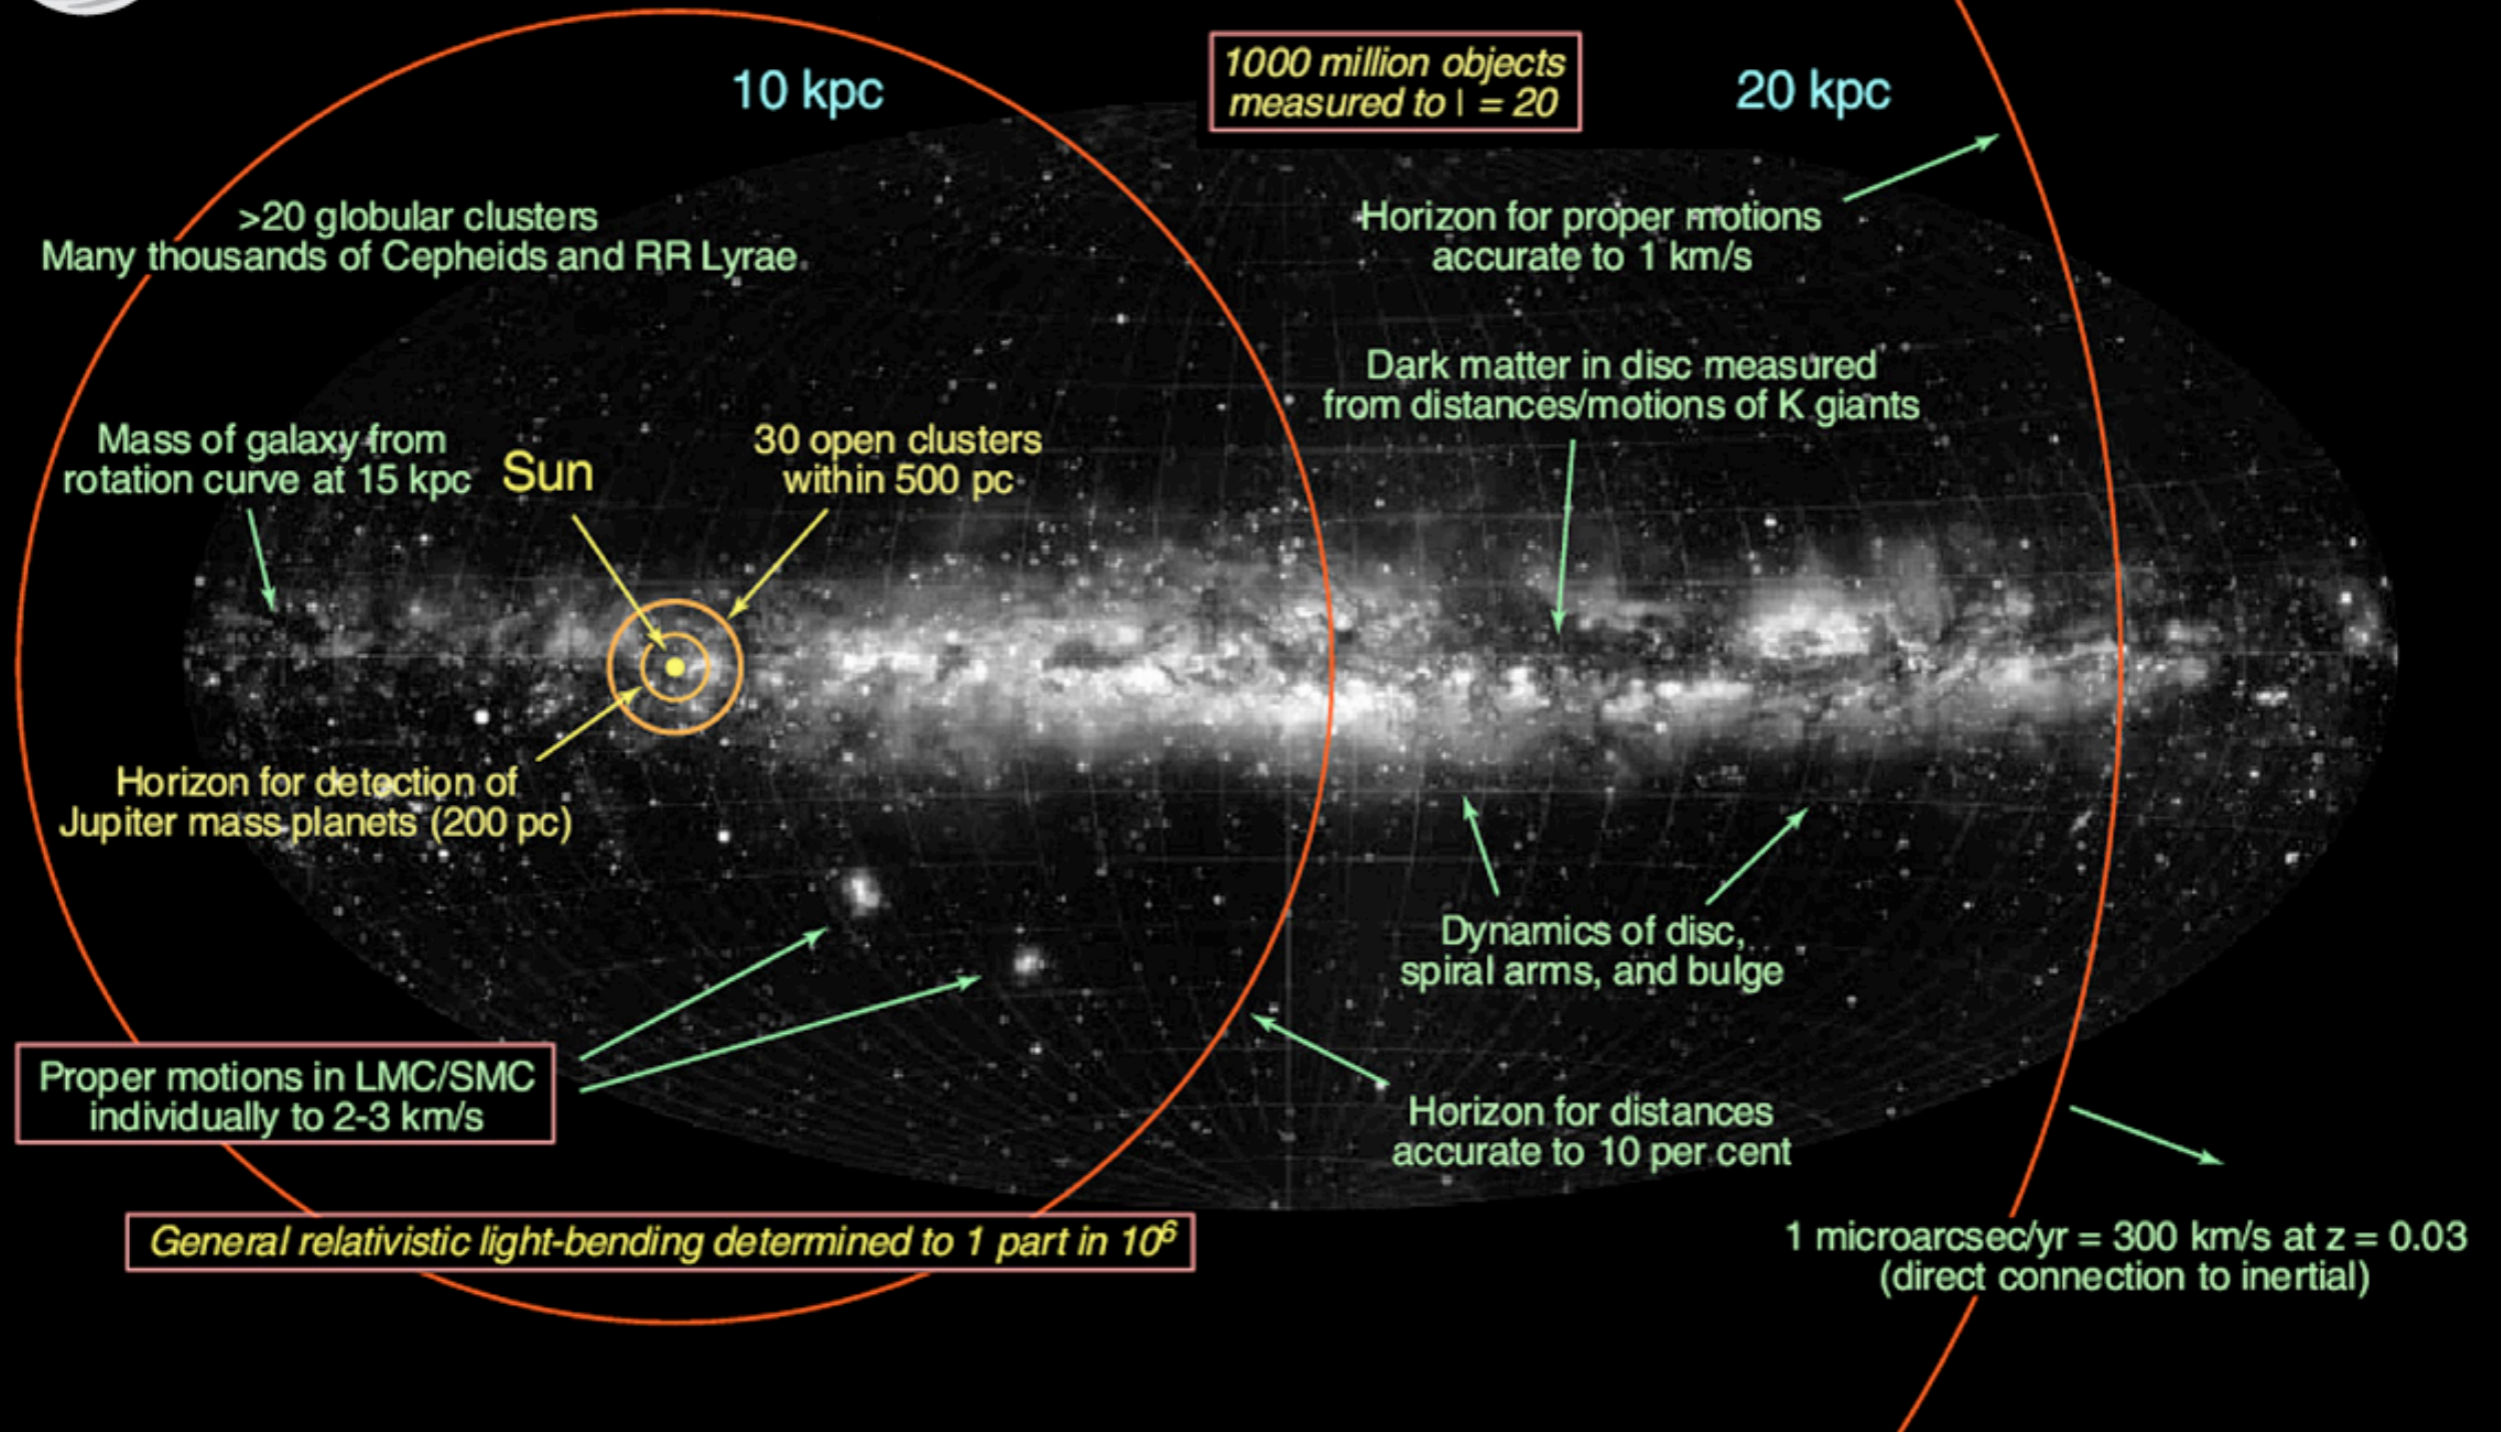

- Gaia ready, but so are other satellites ...

Overview

Gaia at 10% - The Milky Way in 3D

Complete, faint, accurate

	Hipparcos	Gaia
Magnitude limit	12 mag	20 mag
Completeness	7.3 – 9.0 mag	20 mag
Bright limit	0 mag	6 mag
Number of objects	120,000	26 million to $V = 15$ 250 million to $V = 18$ 1000 million to $V = 20$
Effective distance	1 kpc	50 kpc
Quasars	1 (3C 273)	500,000
Galaxies	None	1,000,000
Accuracy	1 milliarcsec	7 μ arcsec at $V = 10$ 10 – 25 μ arcsec at $V = 15$ 300 μ arcsec at $V = 20$
Photometry	2-colour (B and V)	Low-res. spectra to $V = 20$
Radial velocity	None	15 km s ⁻¹ to $V = 17$
Observing	Pre-selected	Complete and unbiased

Mission products

- Structure and evolution of the Milky Way
- Stellar physics, time resolved
- Exoplanets (astrometric, transits, ..)
- Solar system objects (including NEOs)
- Distance scale (Magellanic clouds)
- Reference frame
- Alerts, microlensing, quasars, SN & GRB can start already in 2014.
- General relativity
- Dark matter
- and more

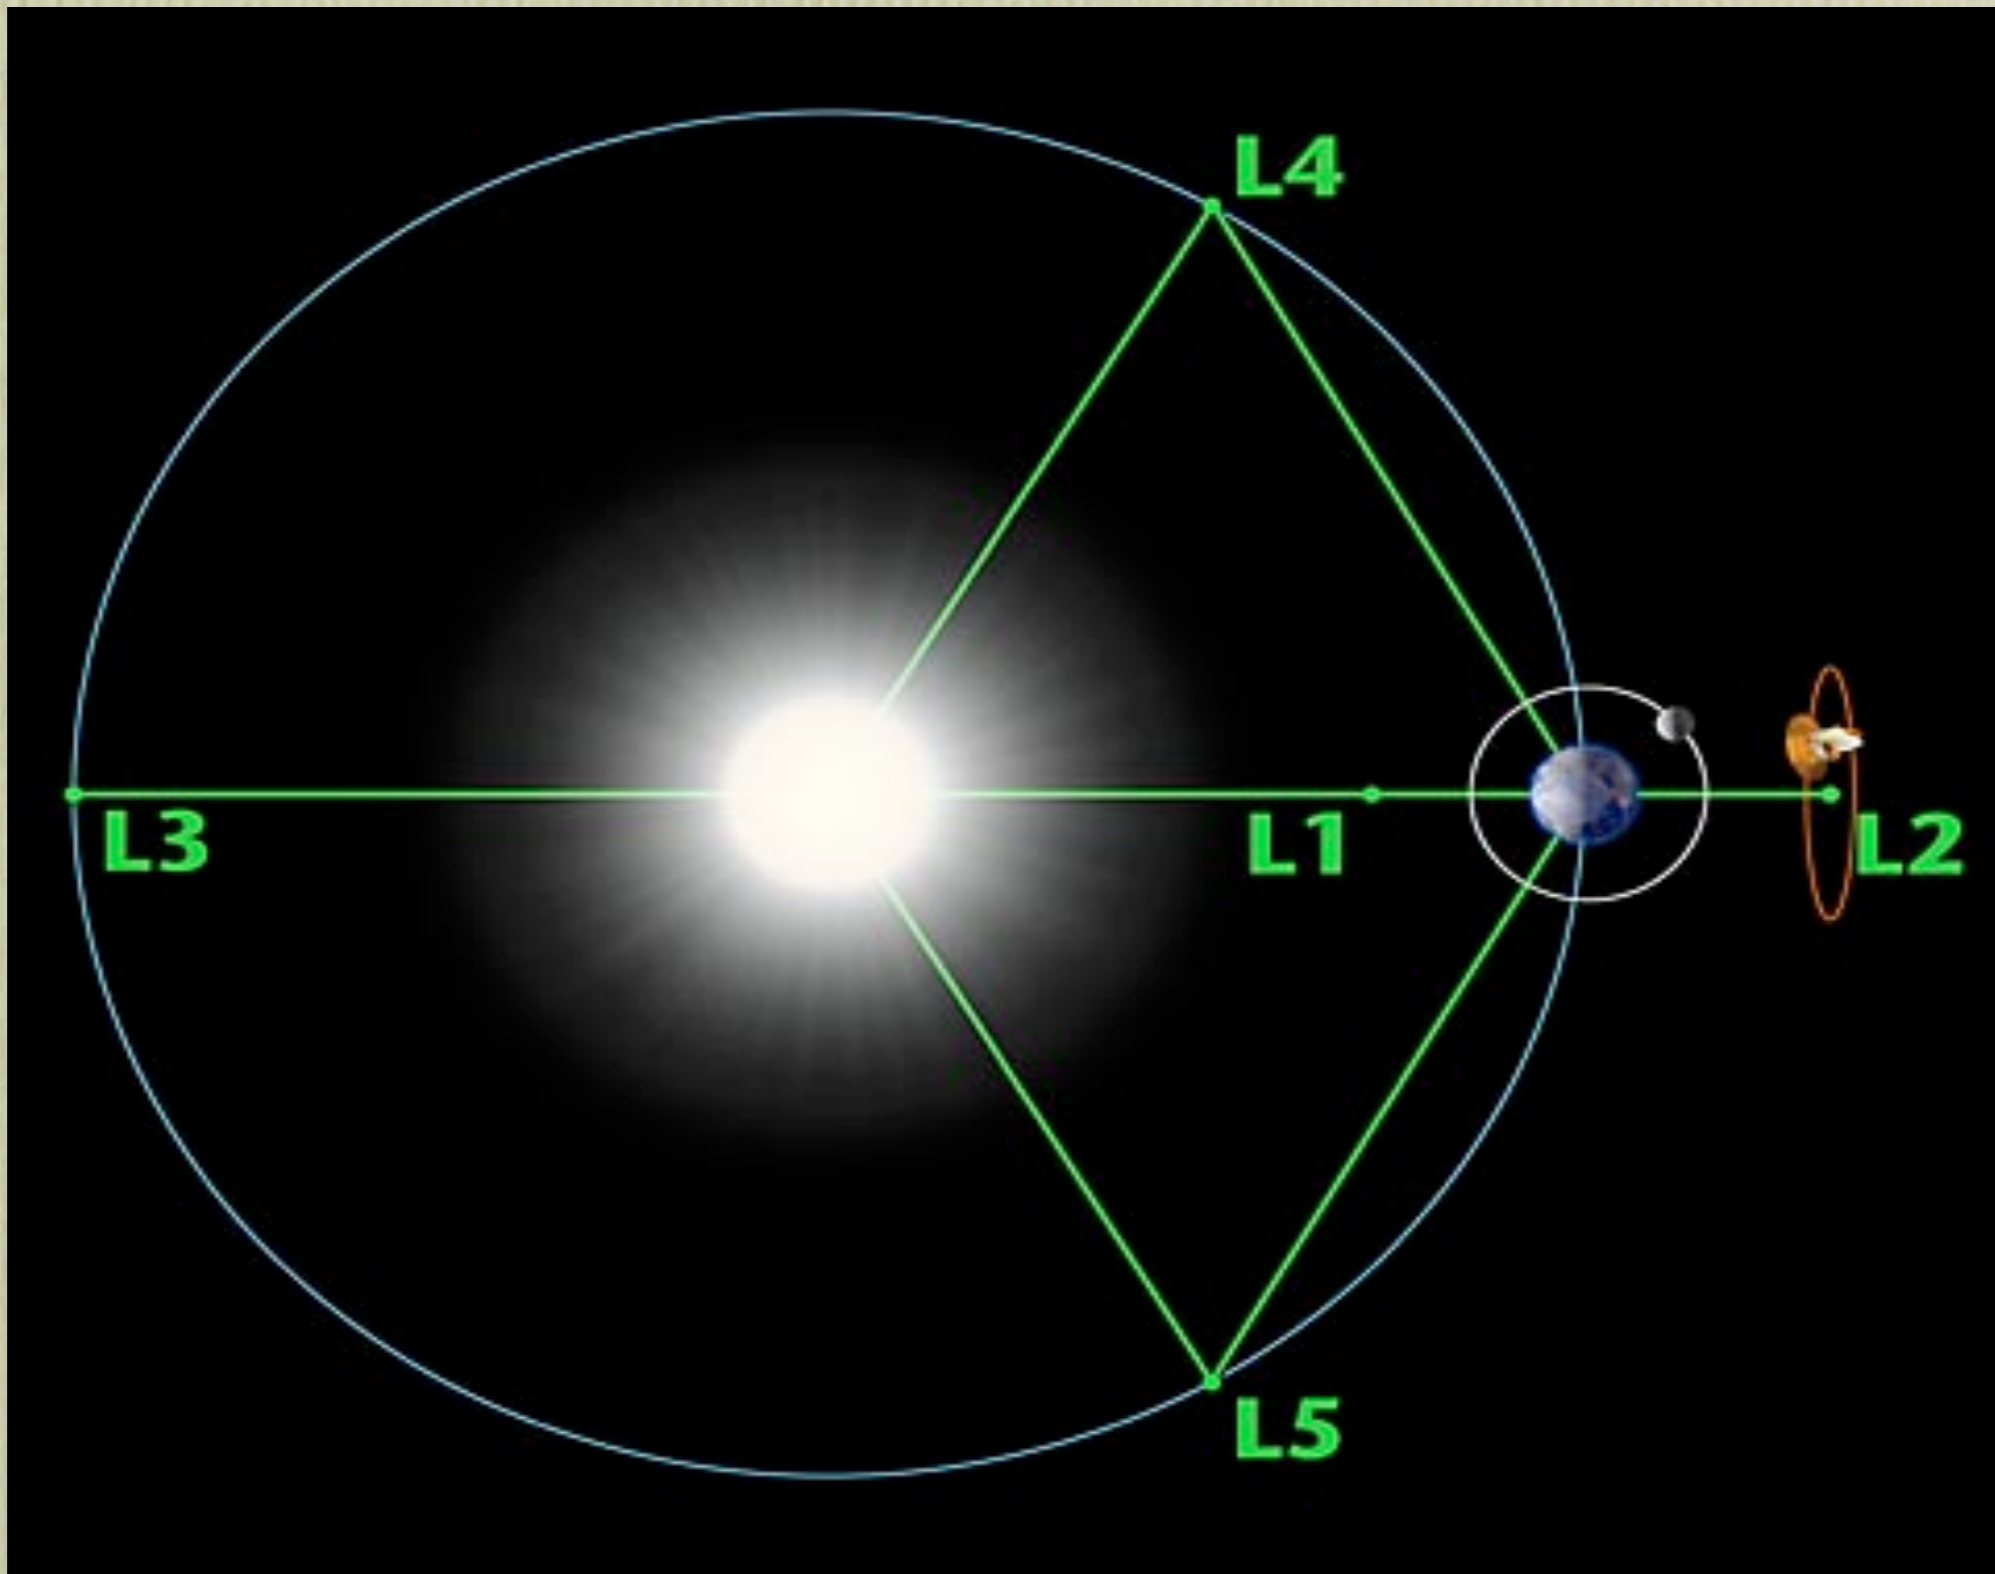

THE ASTRONOMICAL PYRAMID

ILLUSTRATING THE INTERDEPENDENCE OF THE VARIOUS AREAS OF STUDY

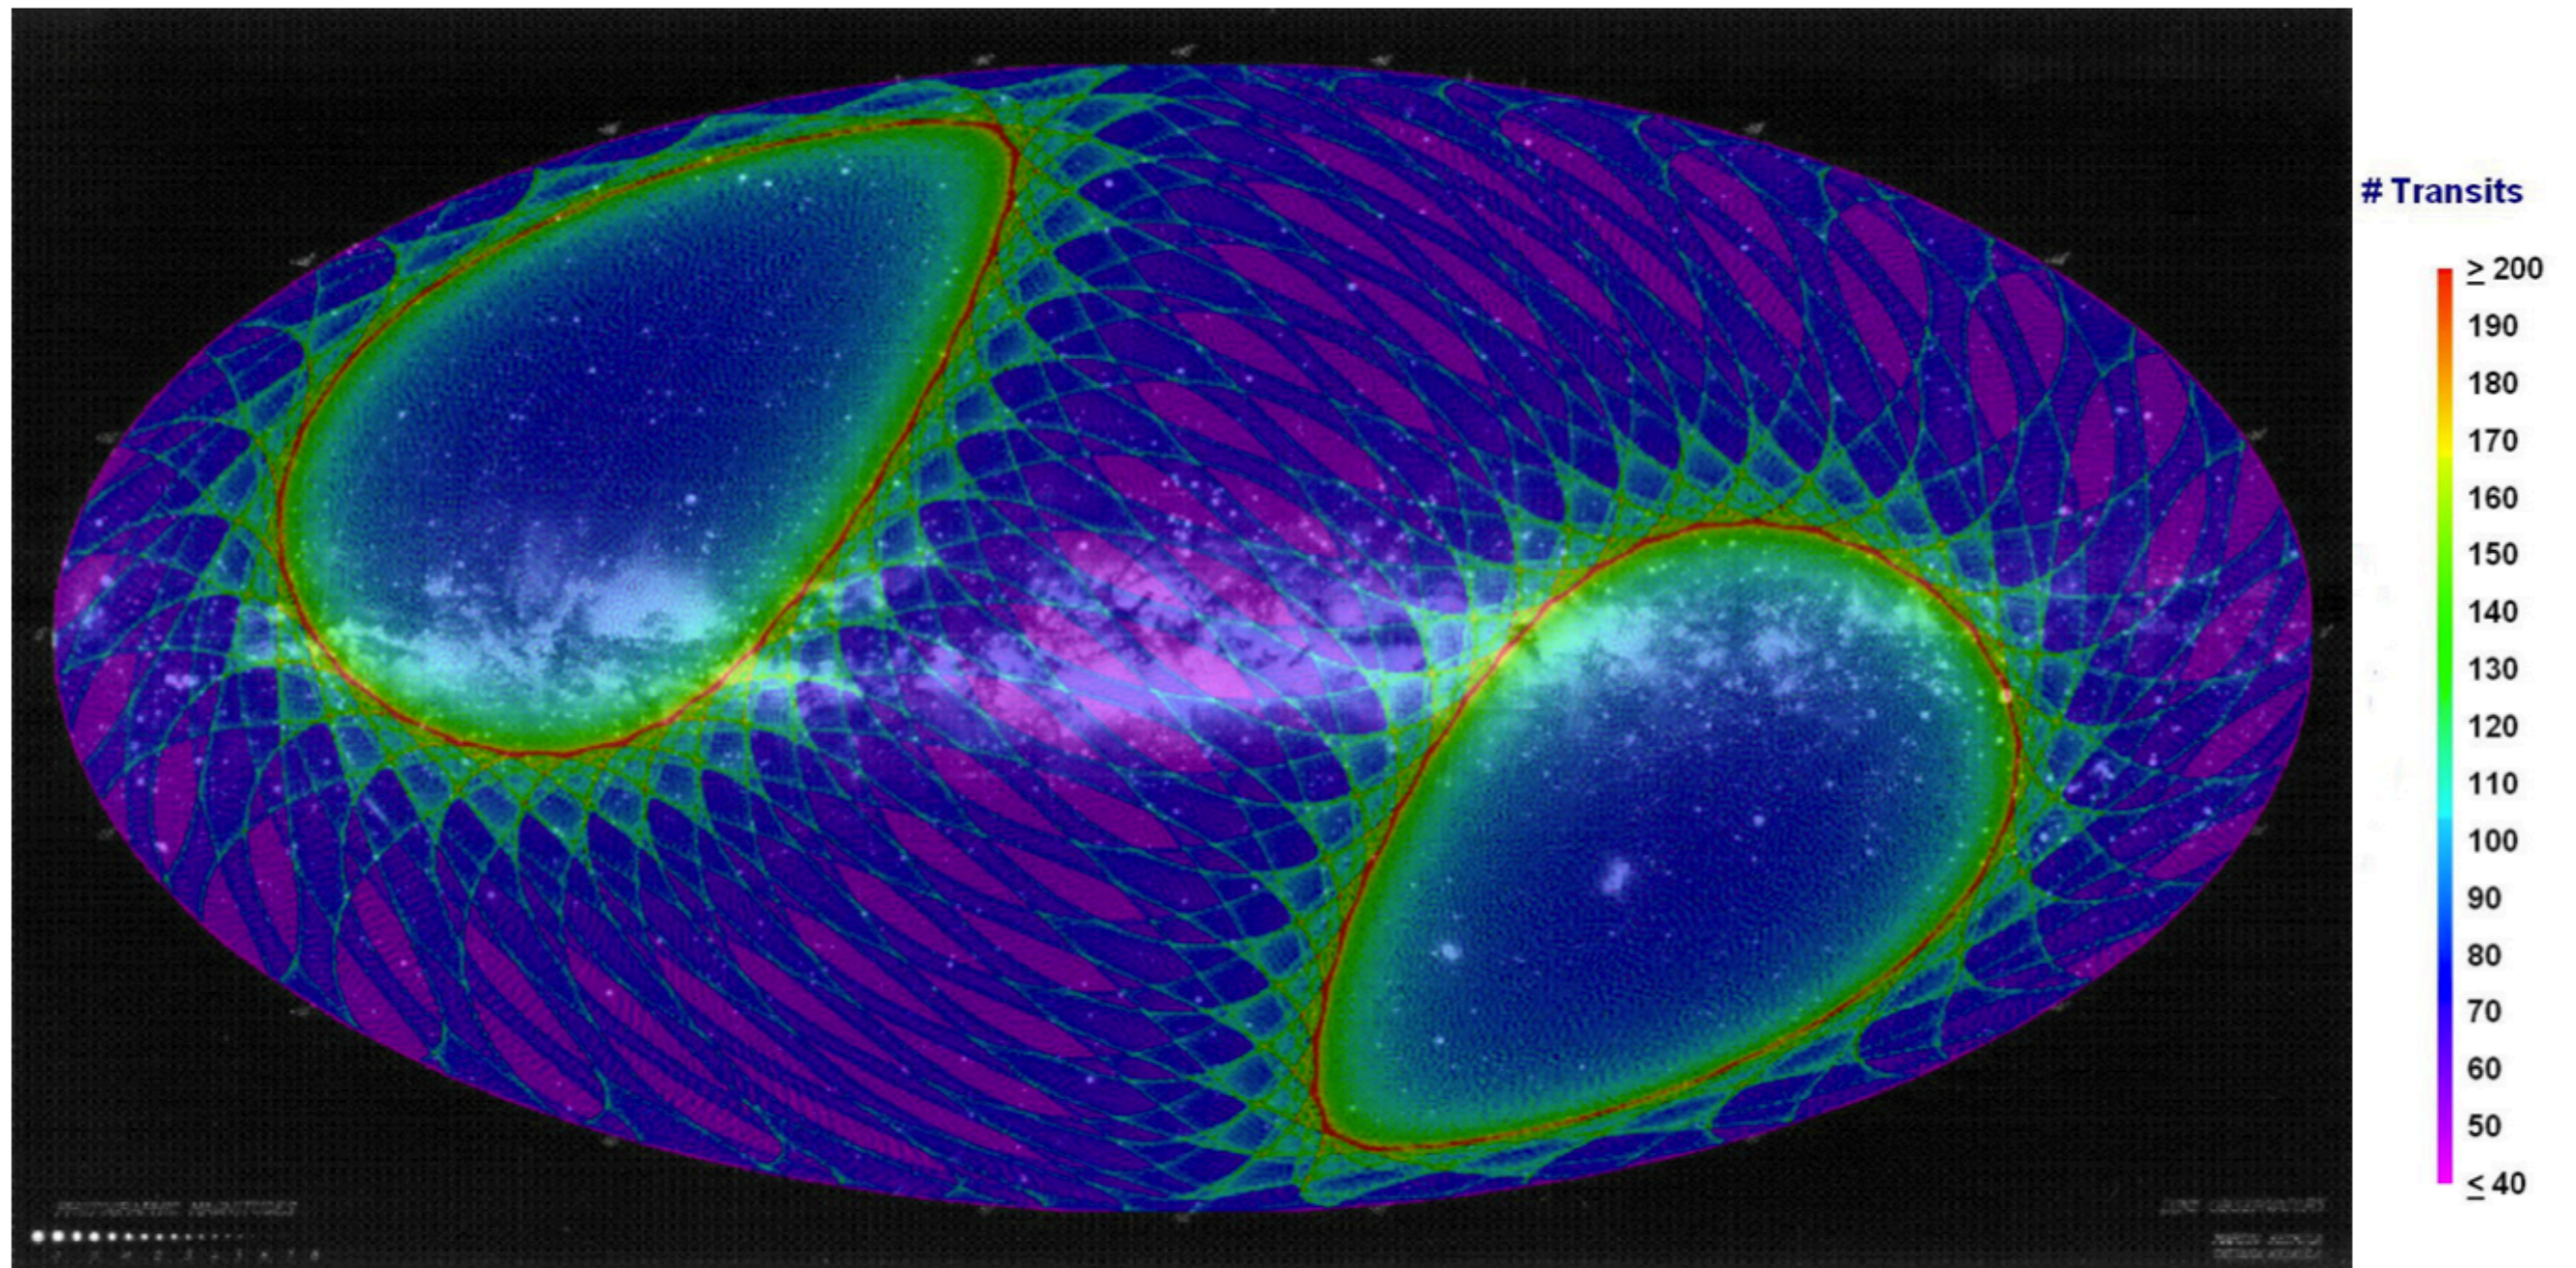

GET BACK TO BASICS -- SUPPORT ASTROMETRY

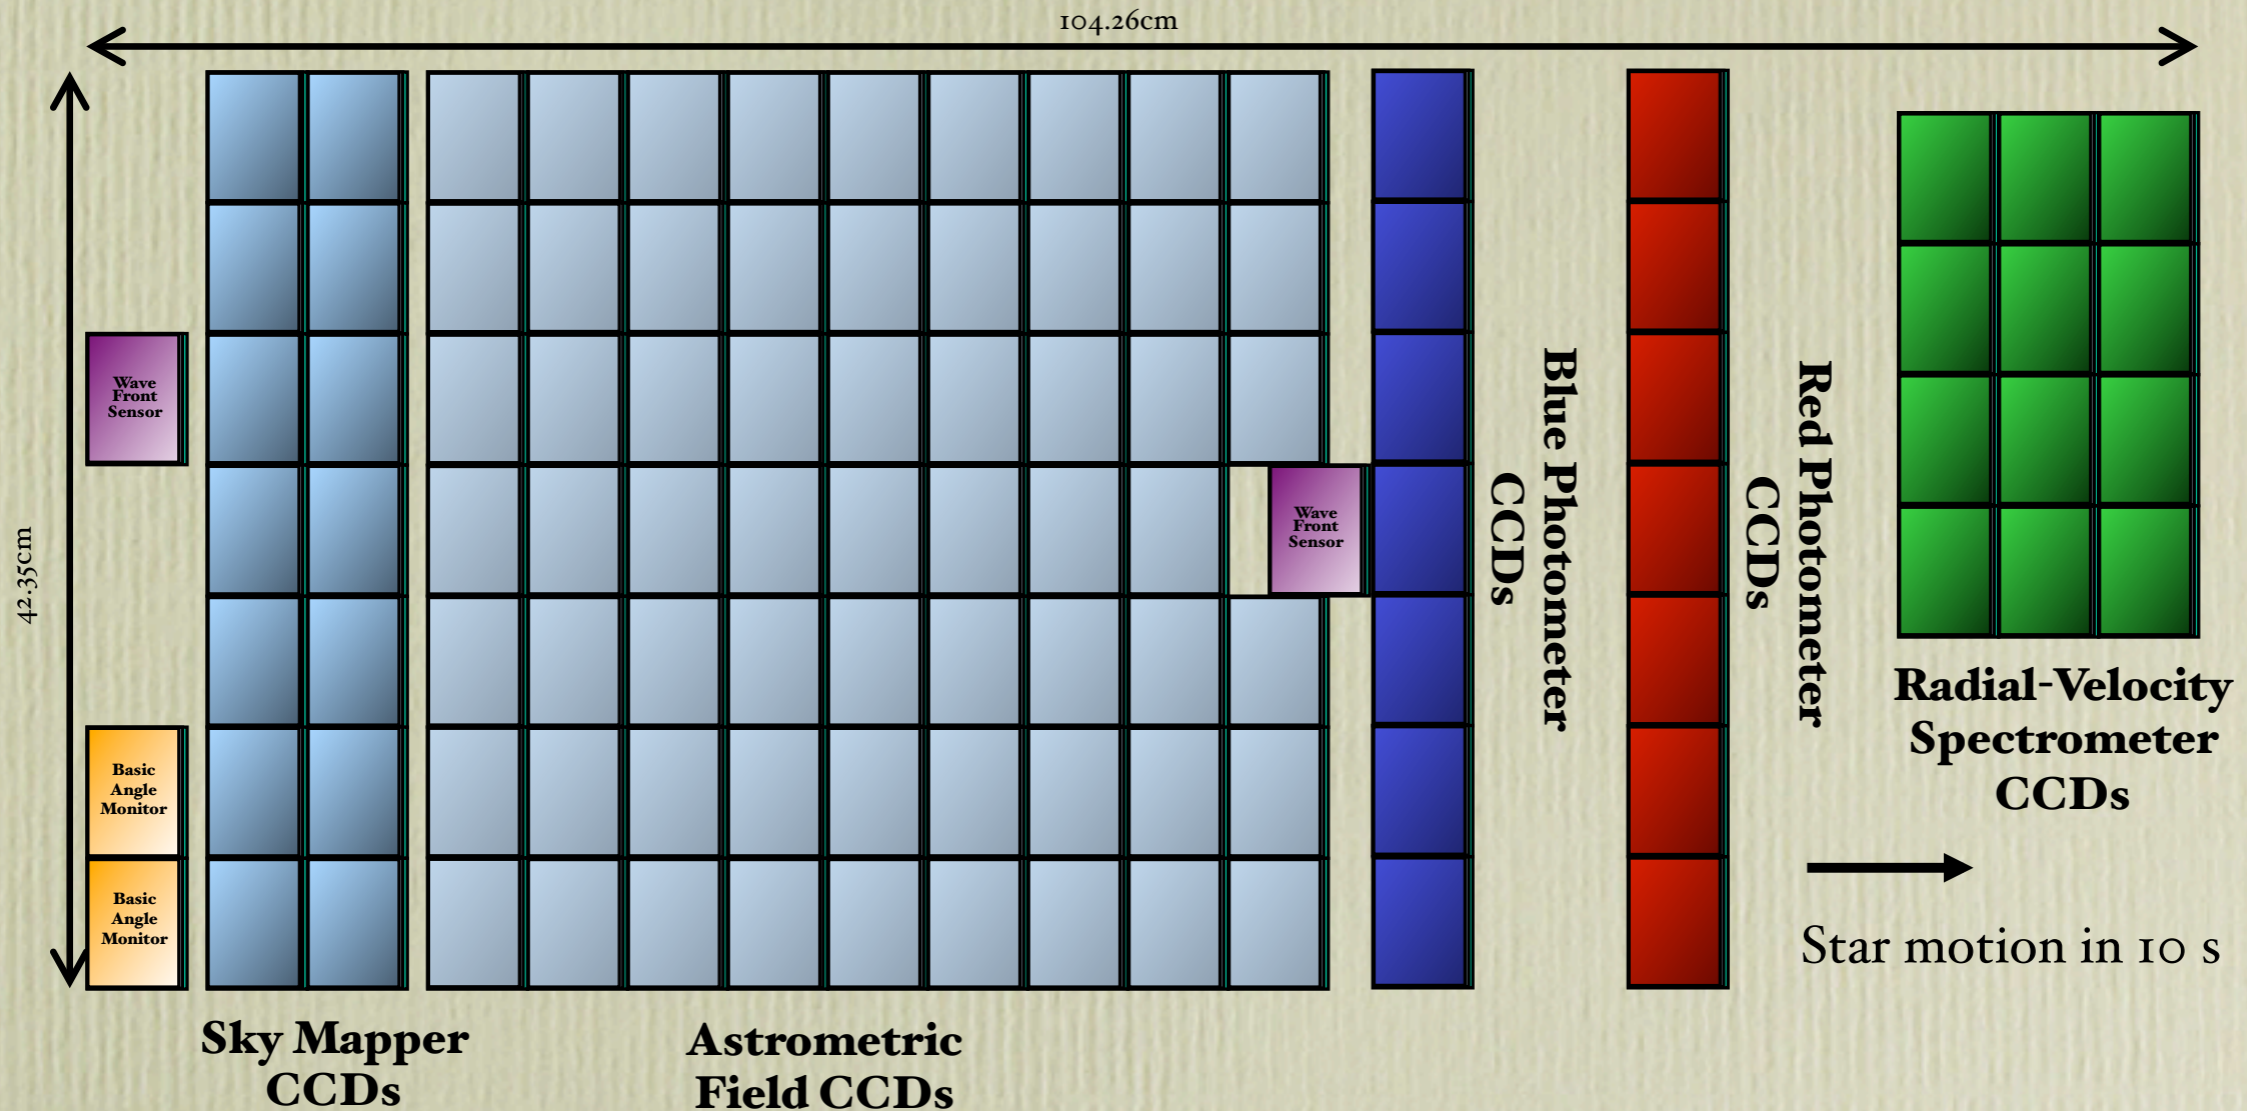

The sky as seen by Gaia - I

The sky as seen by Gaia - II

Focal Plane - 106 CCD, 938 million pixels

Total field:

- active area: 0.75 deg^2
- CCDs: $14 + 62 + 14 + 12 (+ 4)$
- 4500×1966 pixels (TDI)
- pixel size = $10 \mu\text{m} \times 30 \mu\text{m}$
= $59 \text{ mas} \times 177 \text{ mas}$

Sky mapper:

- detects all objects to 20 mag
- rejects cosmic-ray events
- field-of-view discrimination

Astrometry:

- total detection noise $\sim 6 e^-$

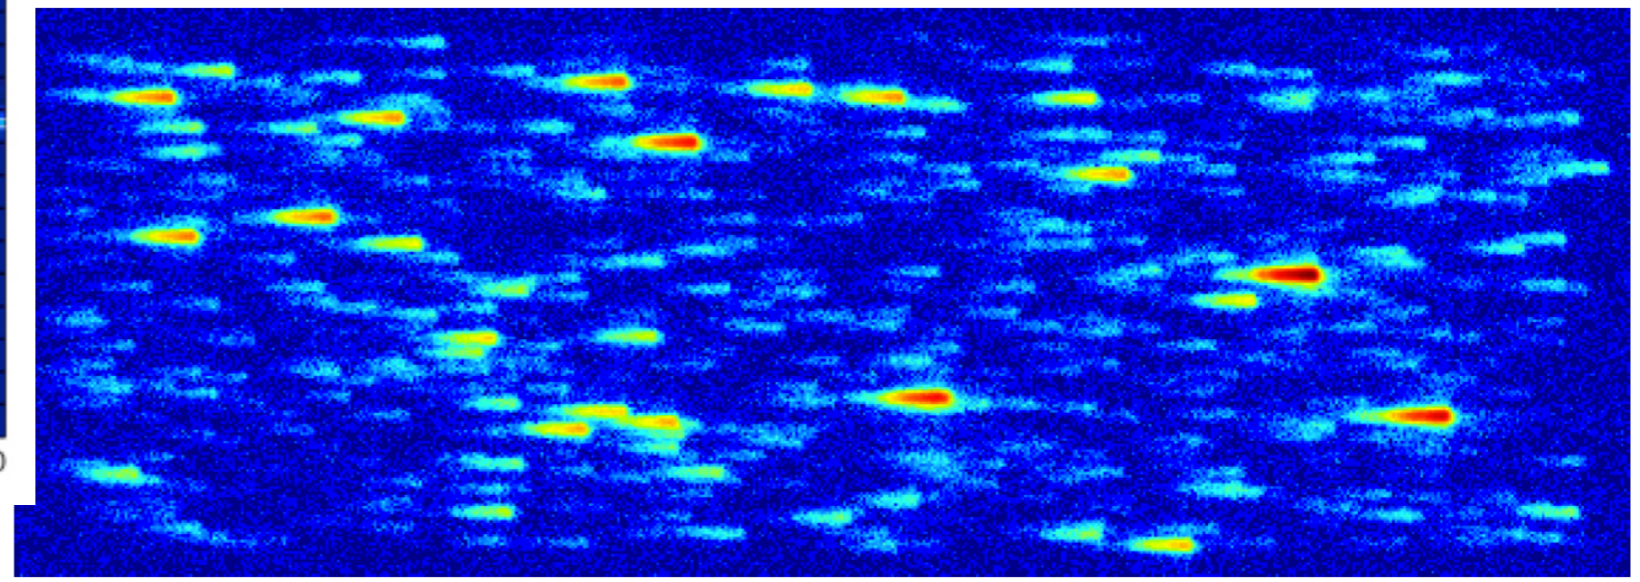

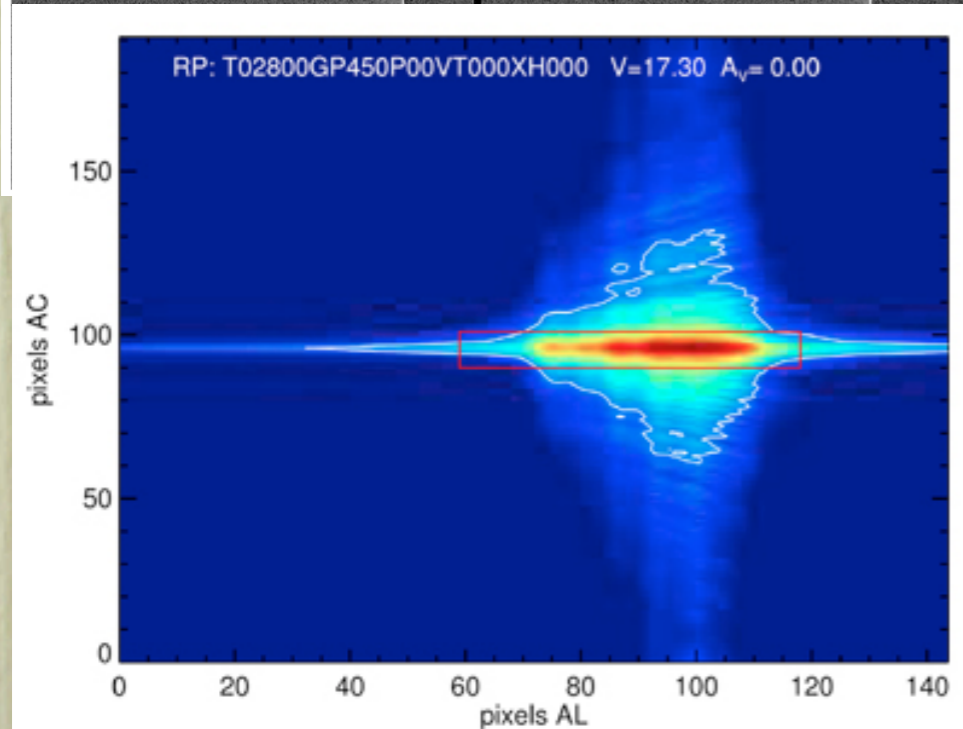

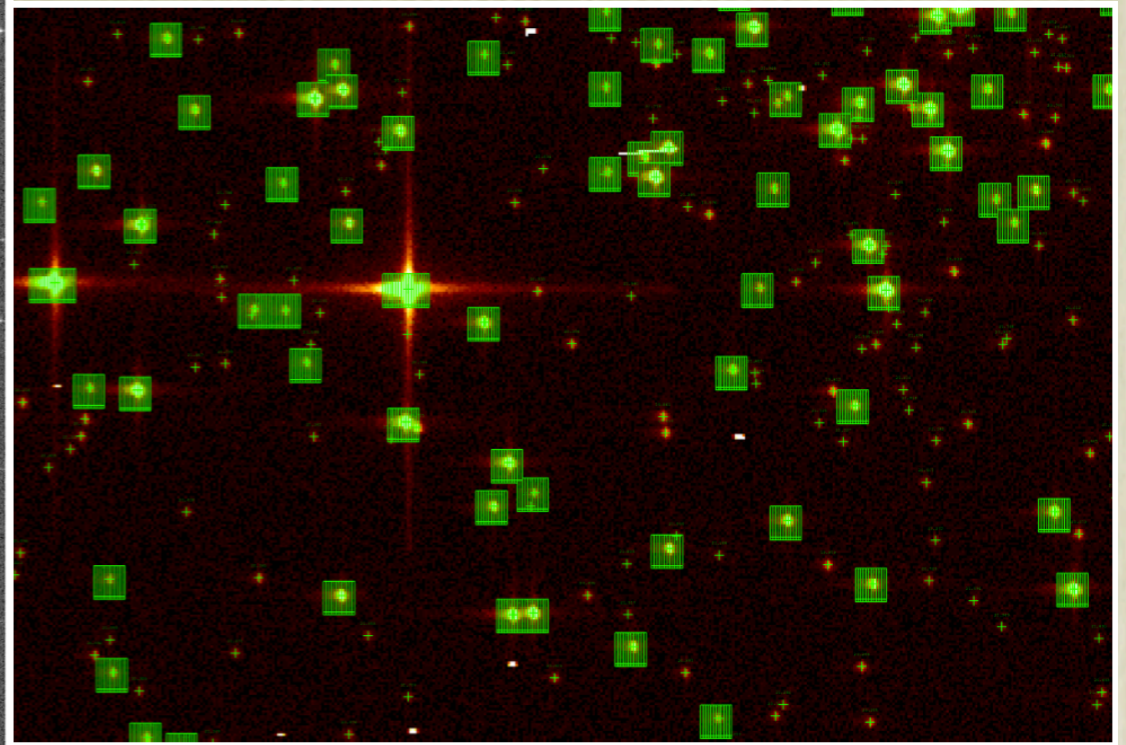

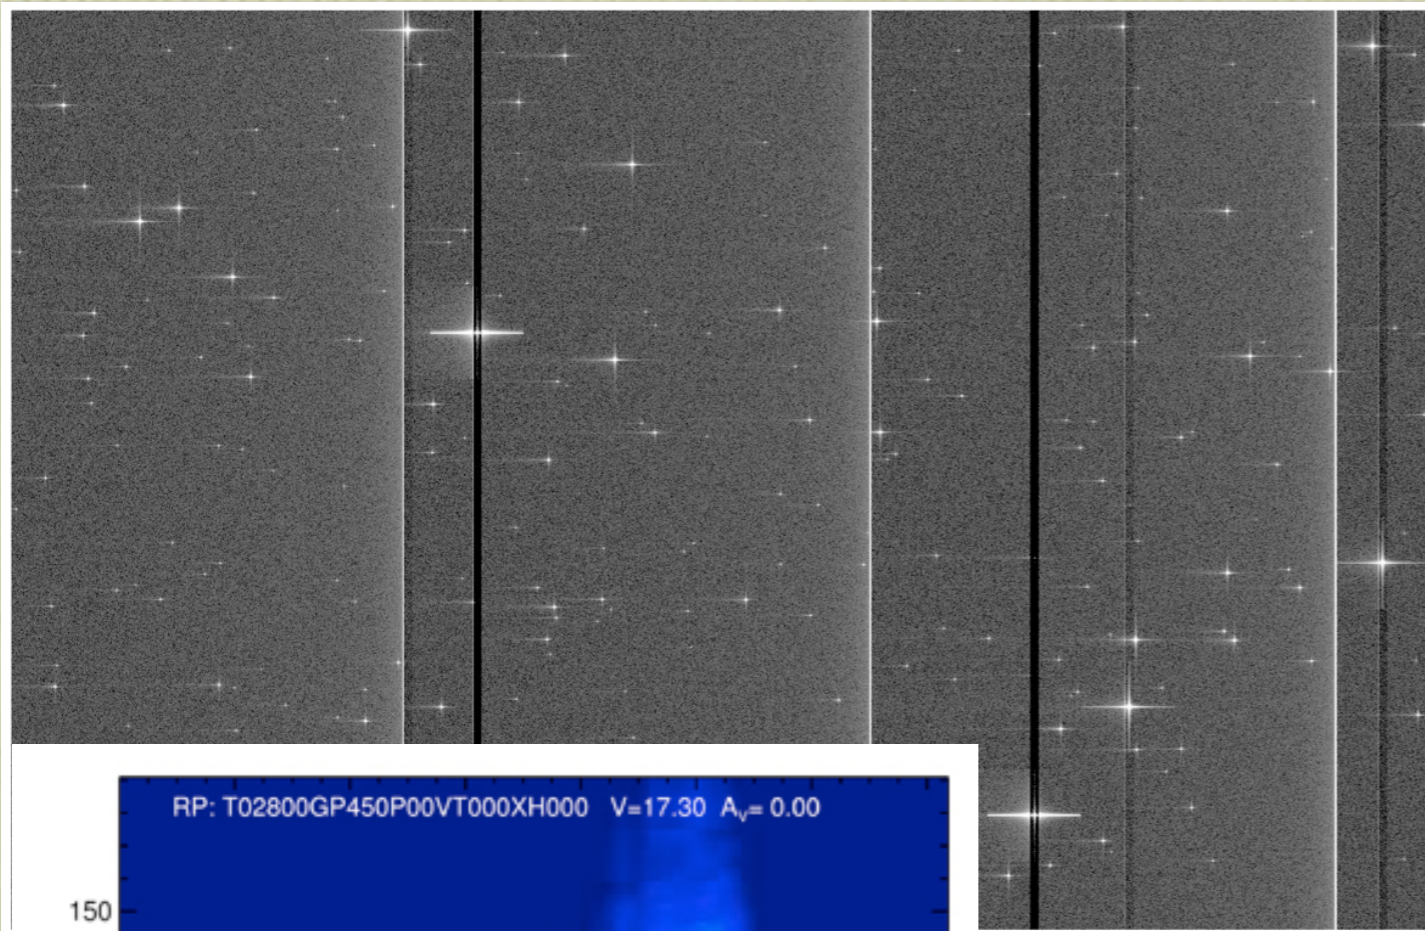

Photometry:

- spectro-photometer
- blue and red CCDs

Spectroscopy:

- high-resolution spectra
- red CCDs

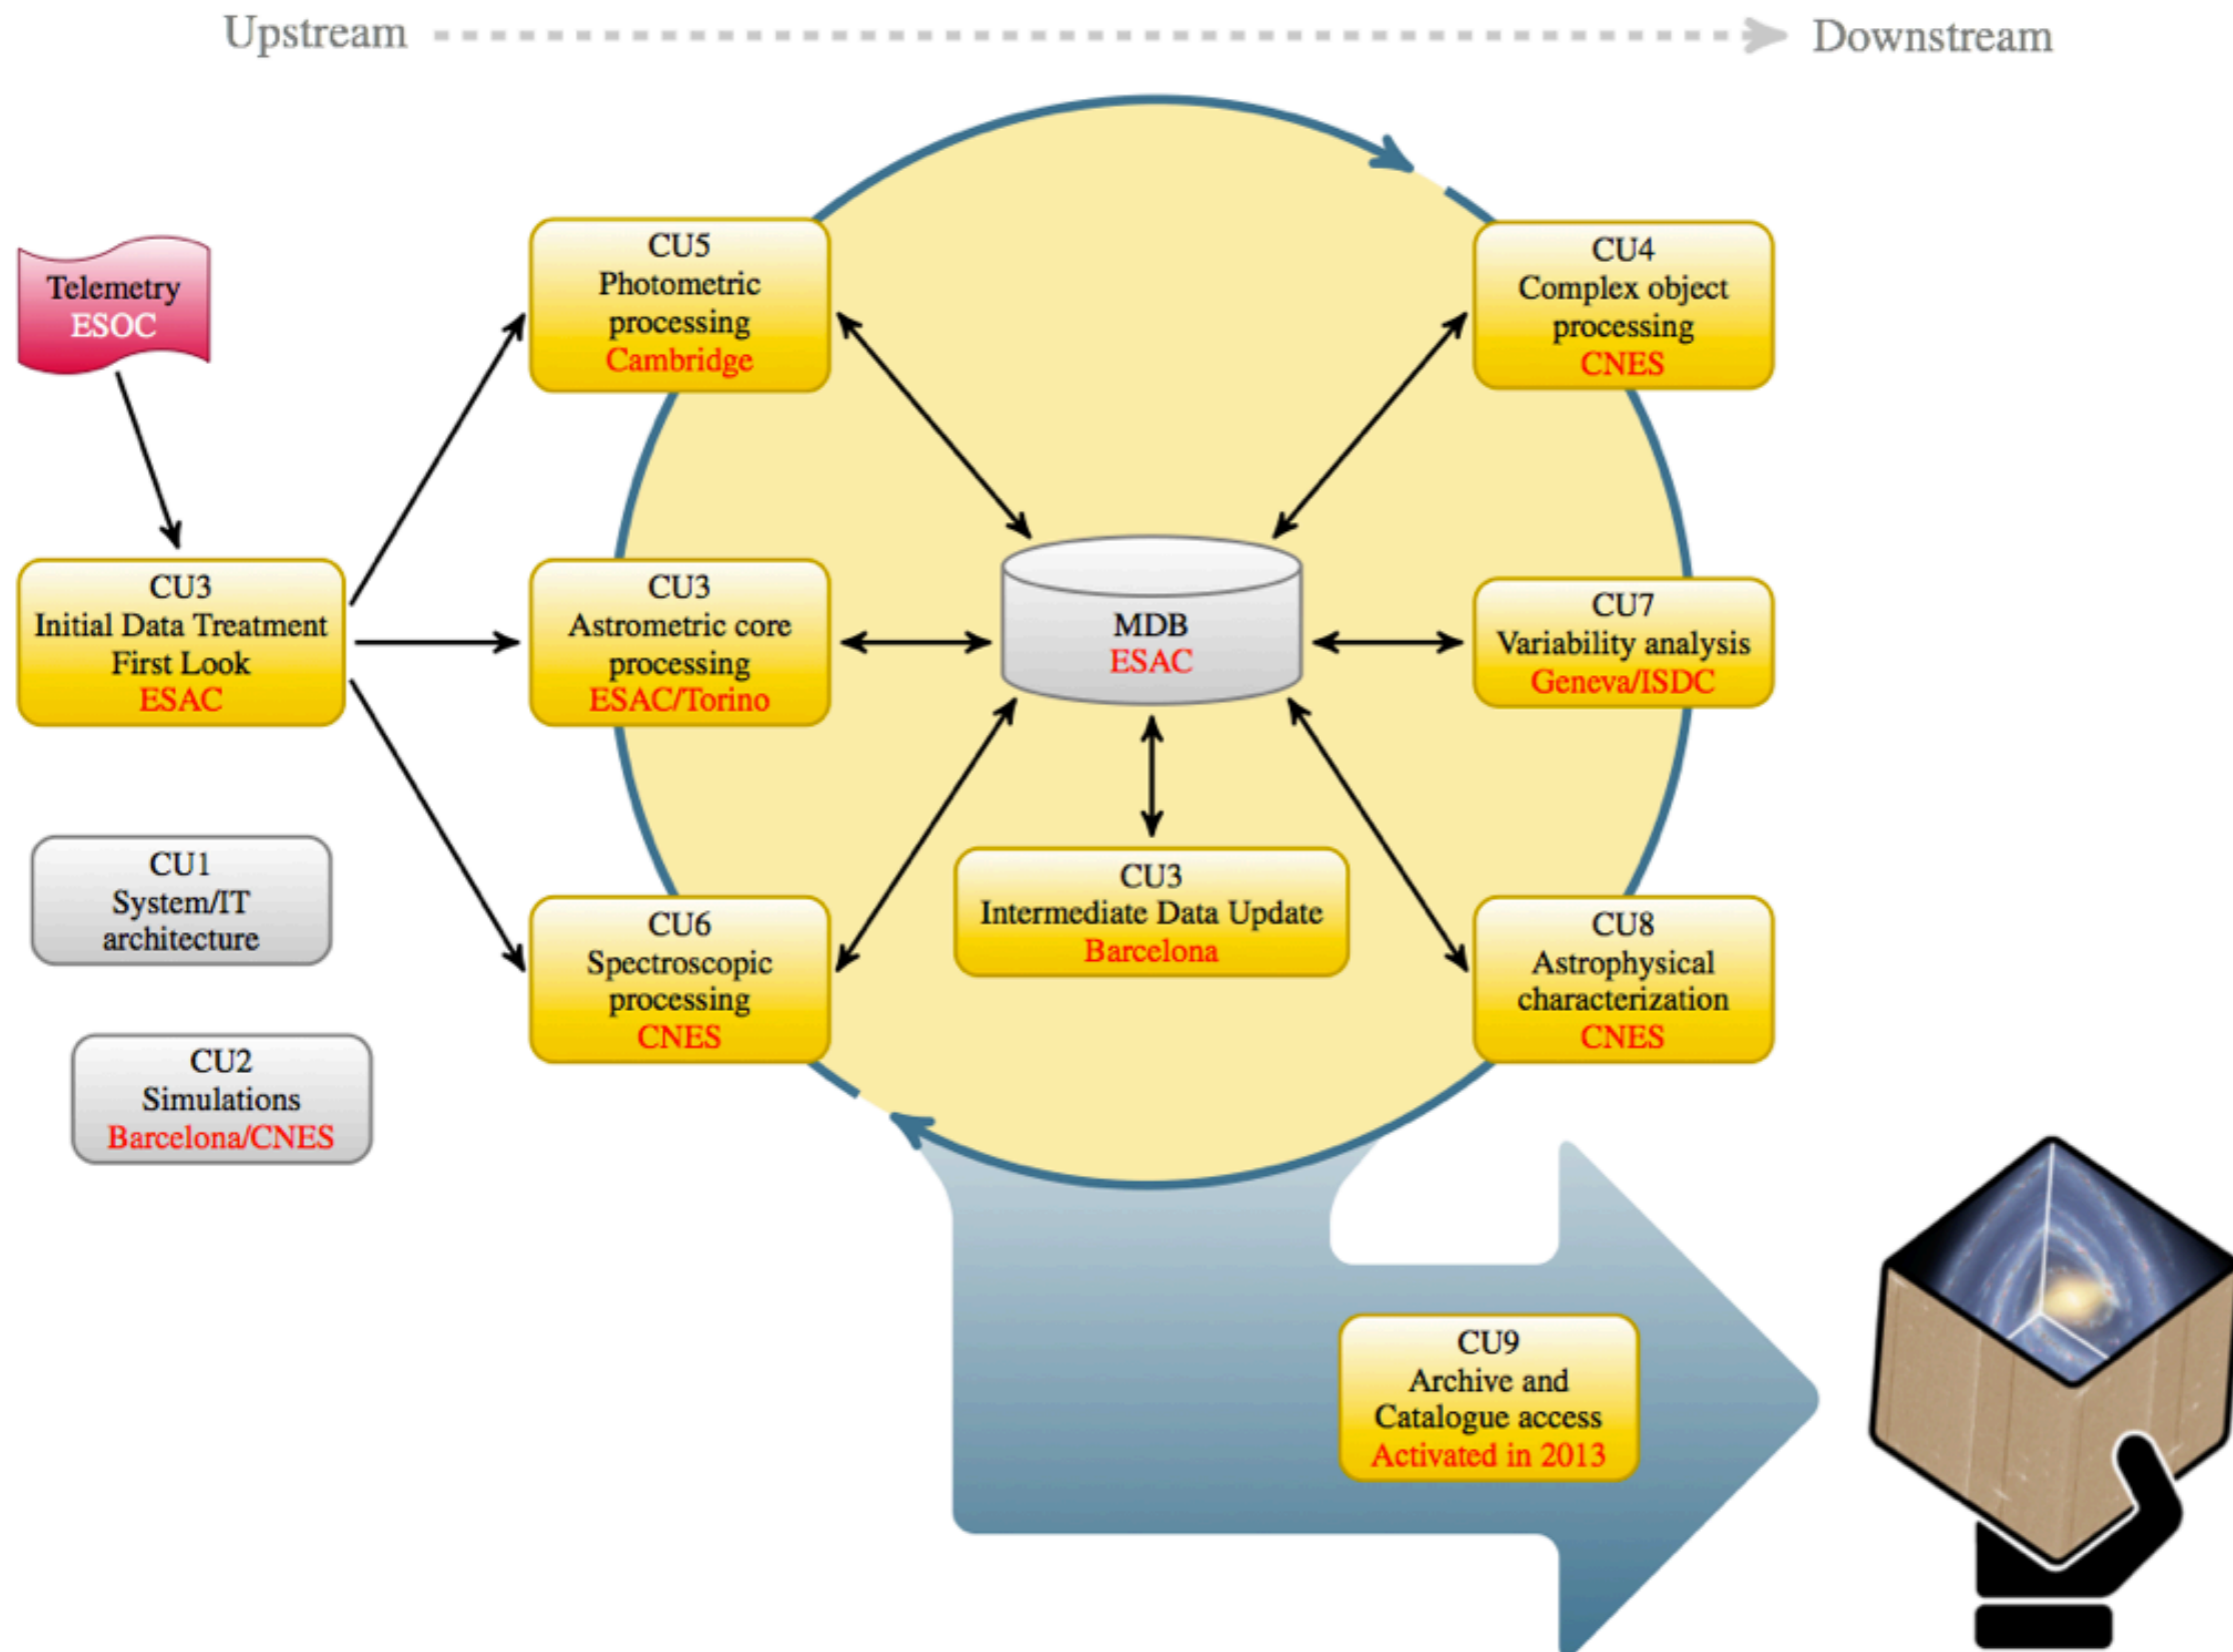

The sky as seen by Gaia - III

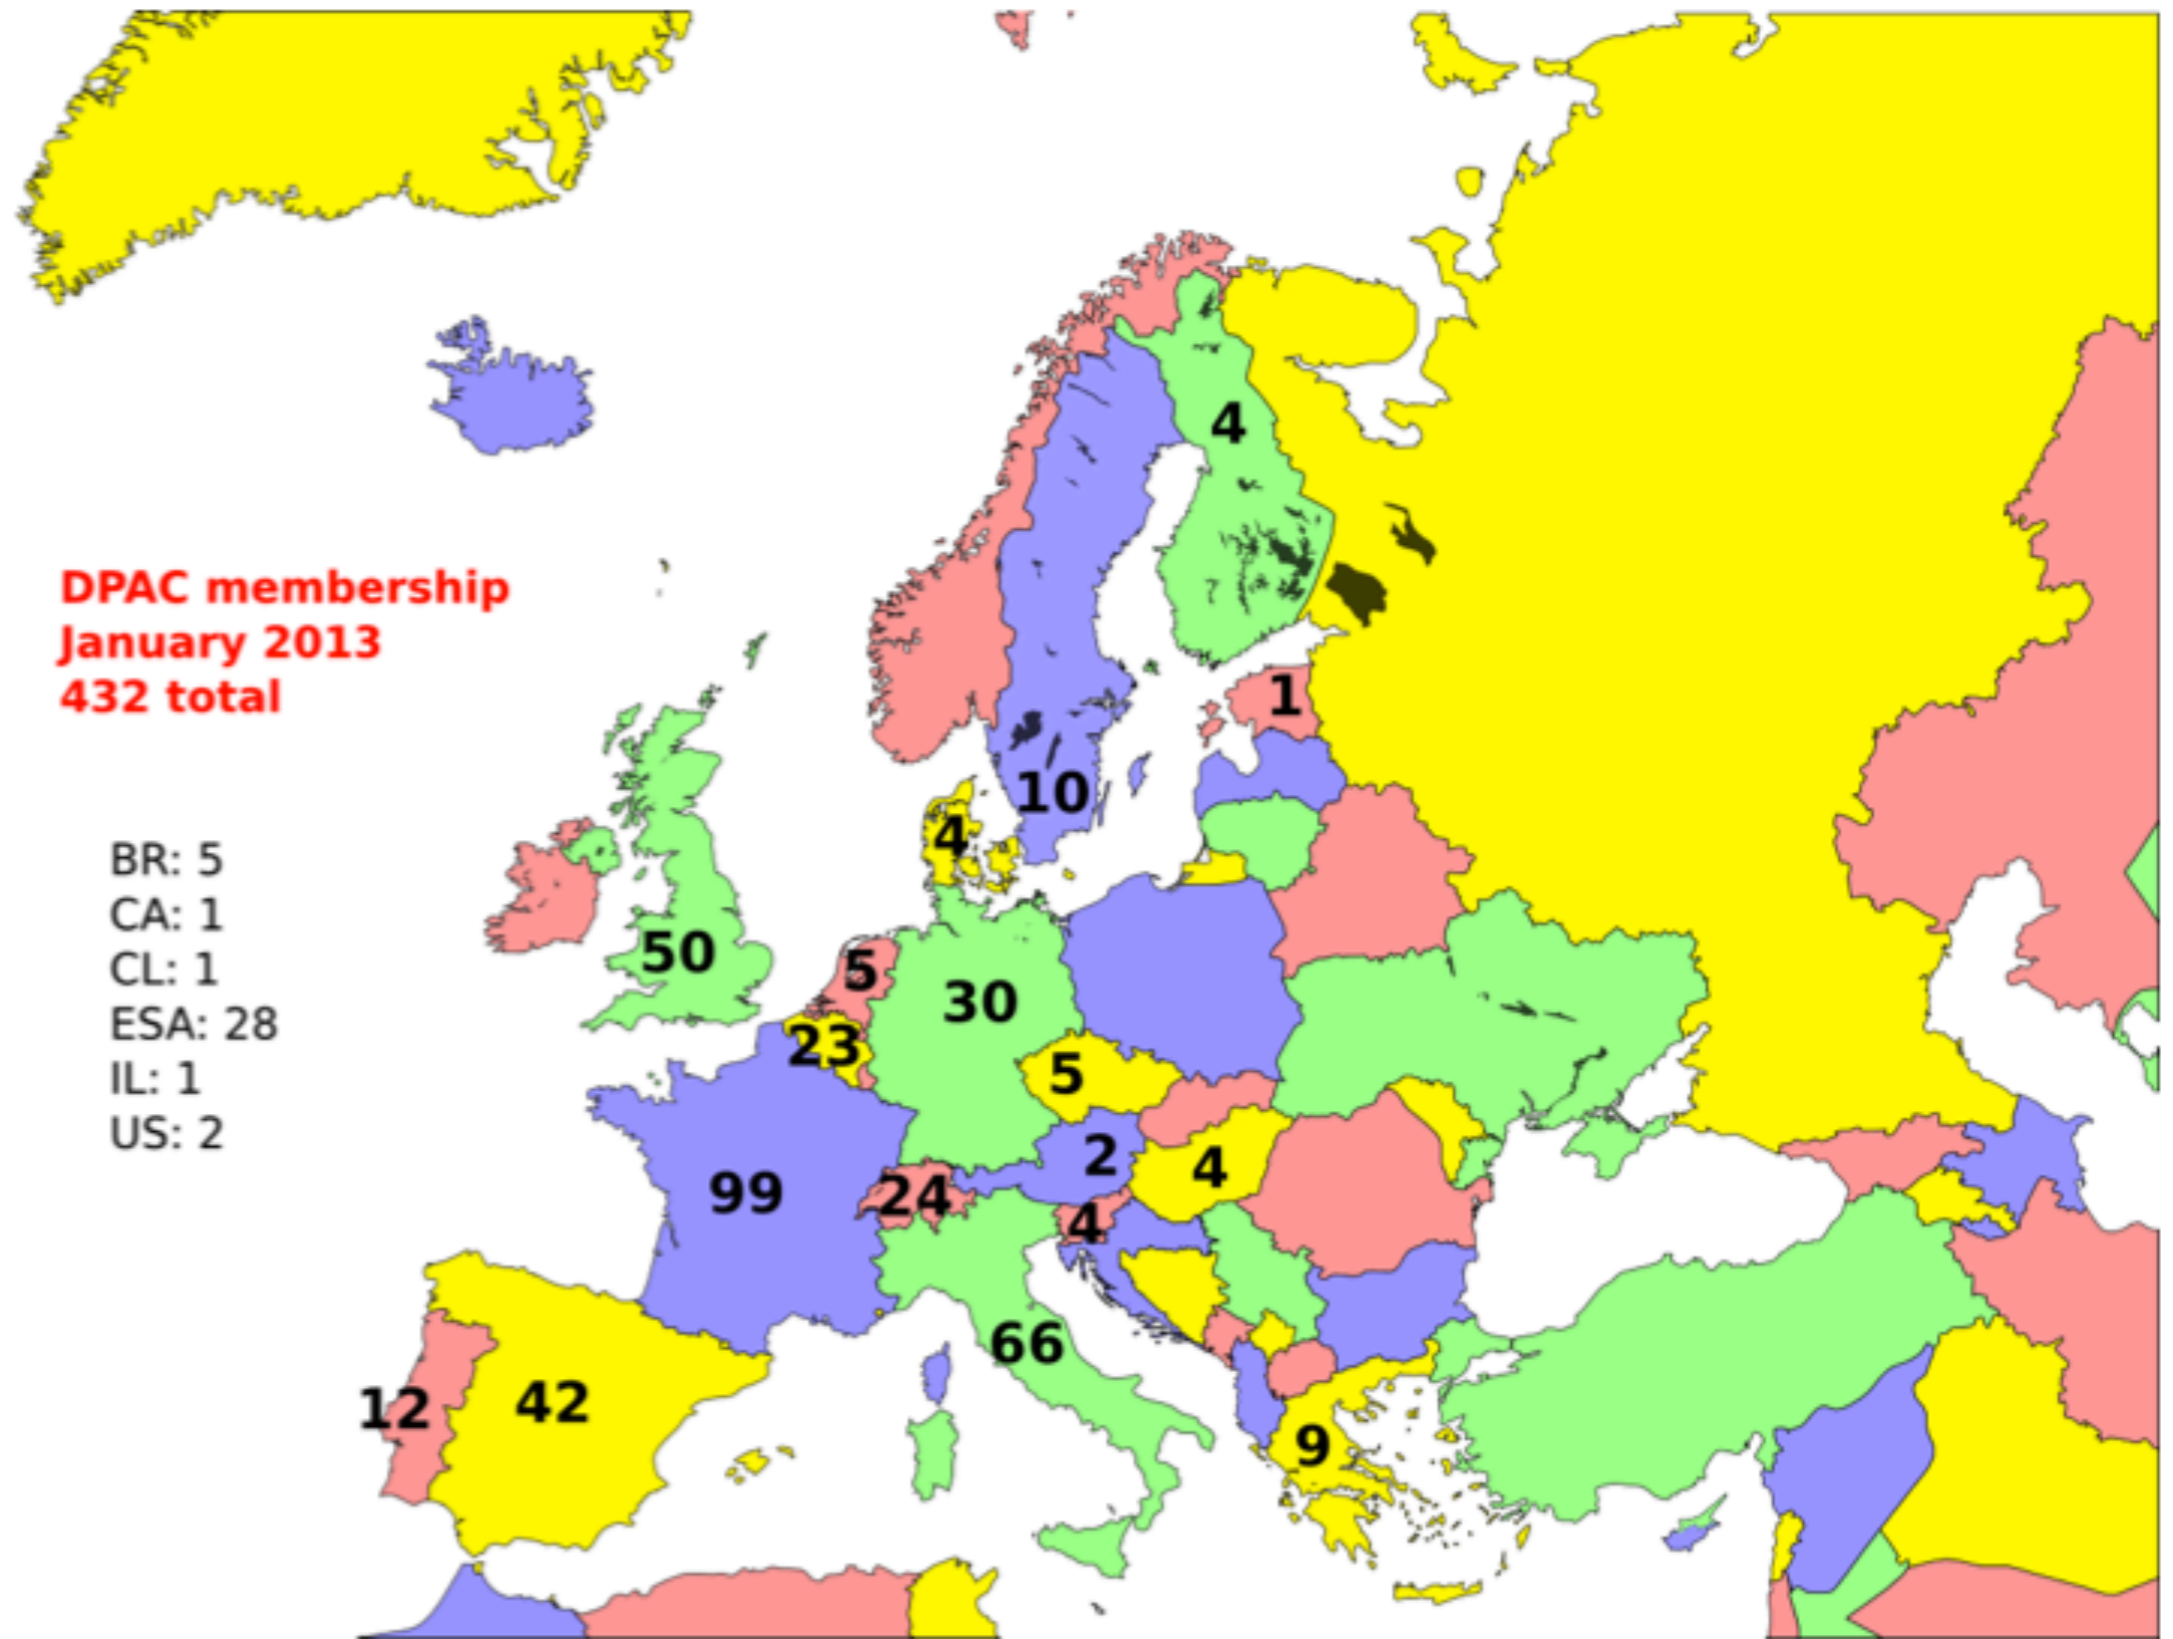

Industrial participation in Gaia

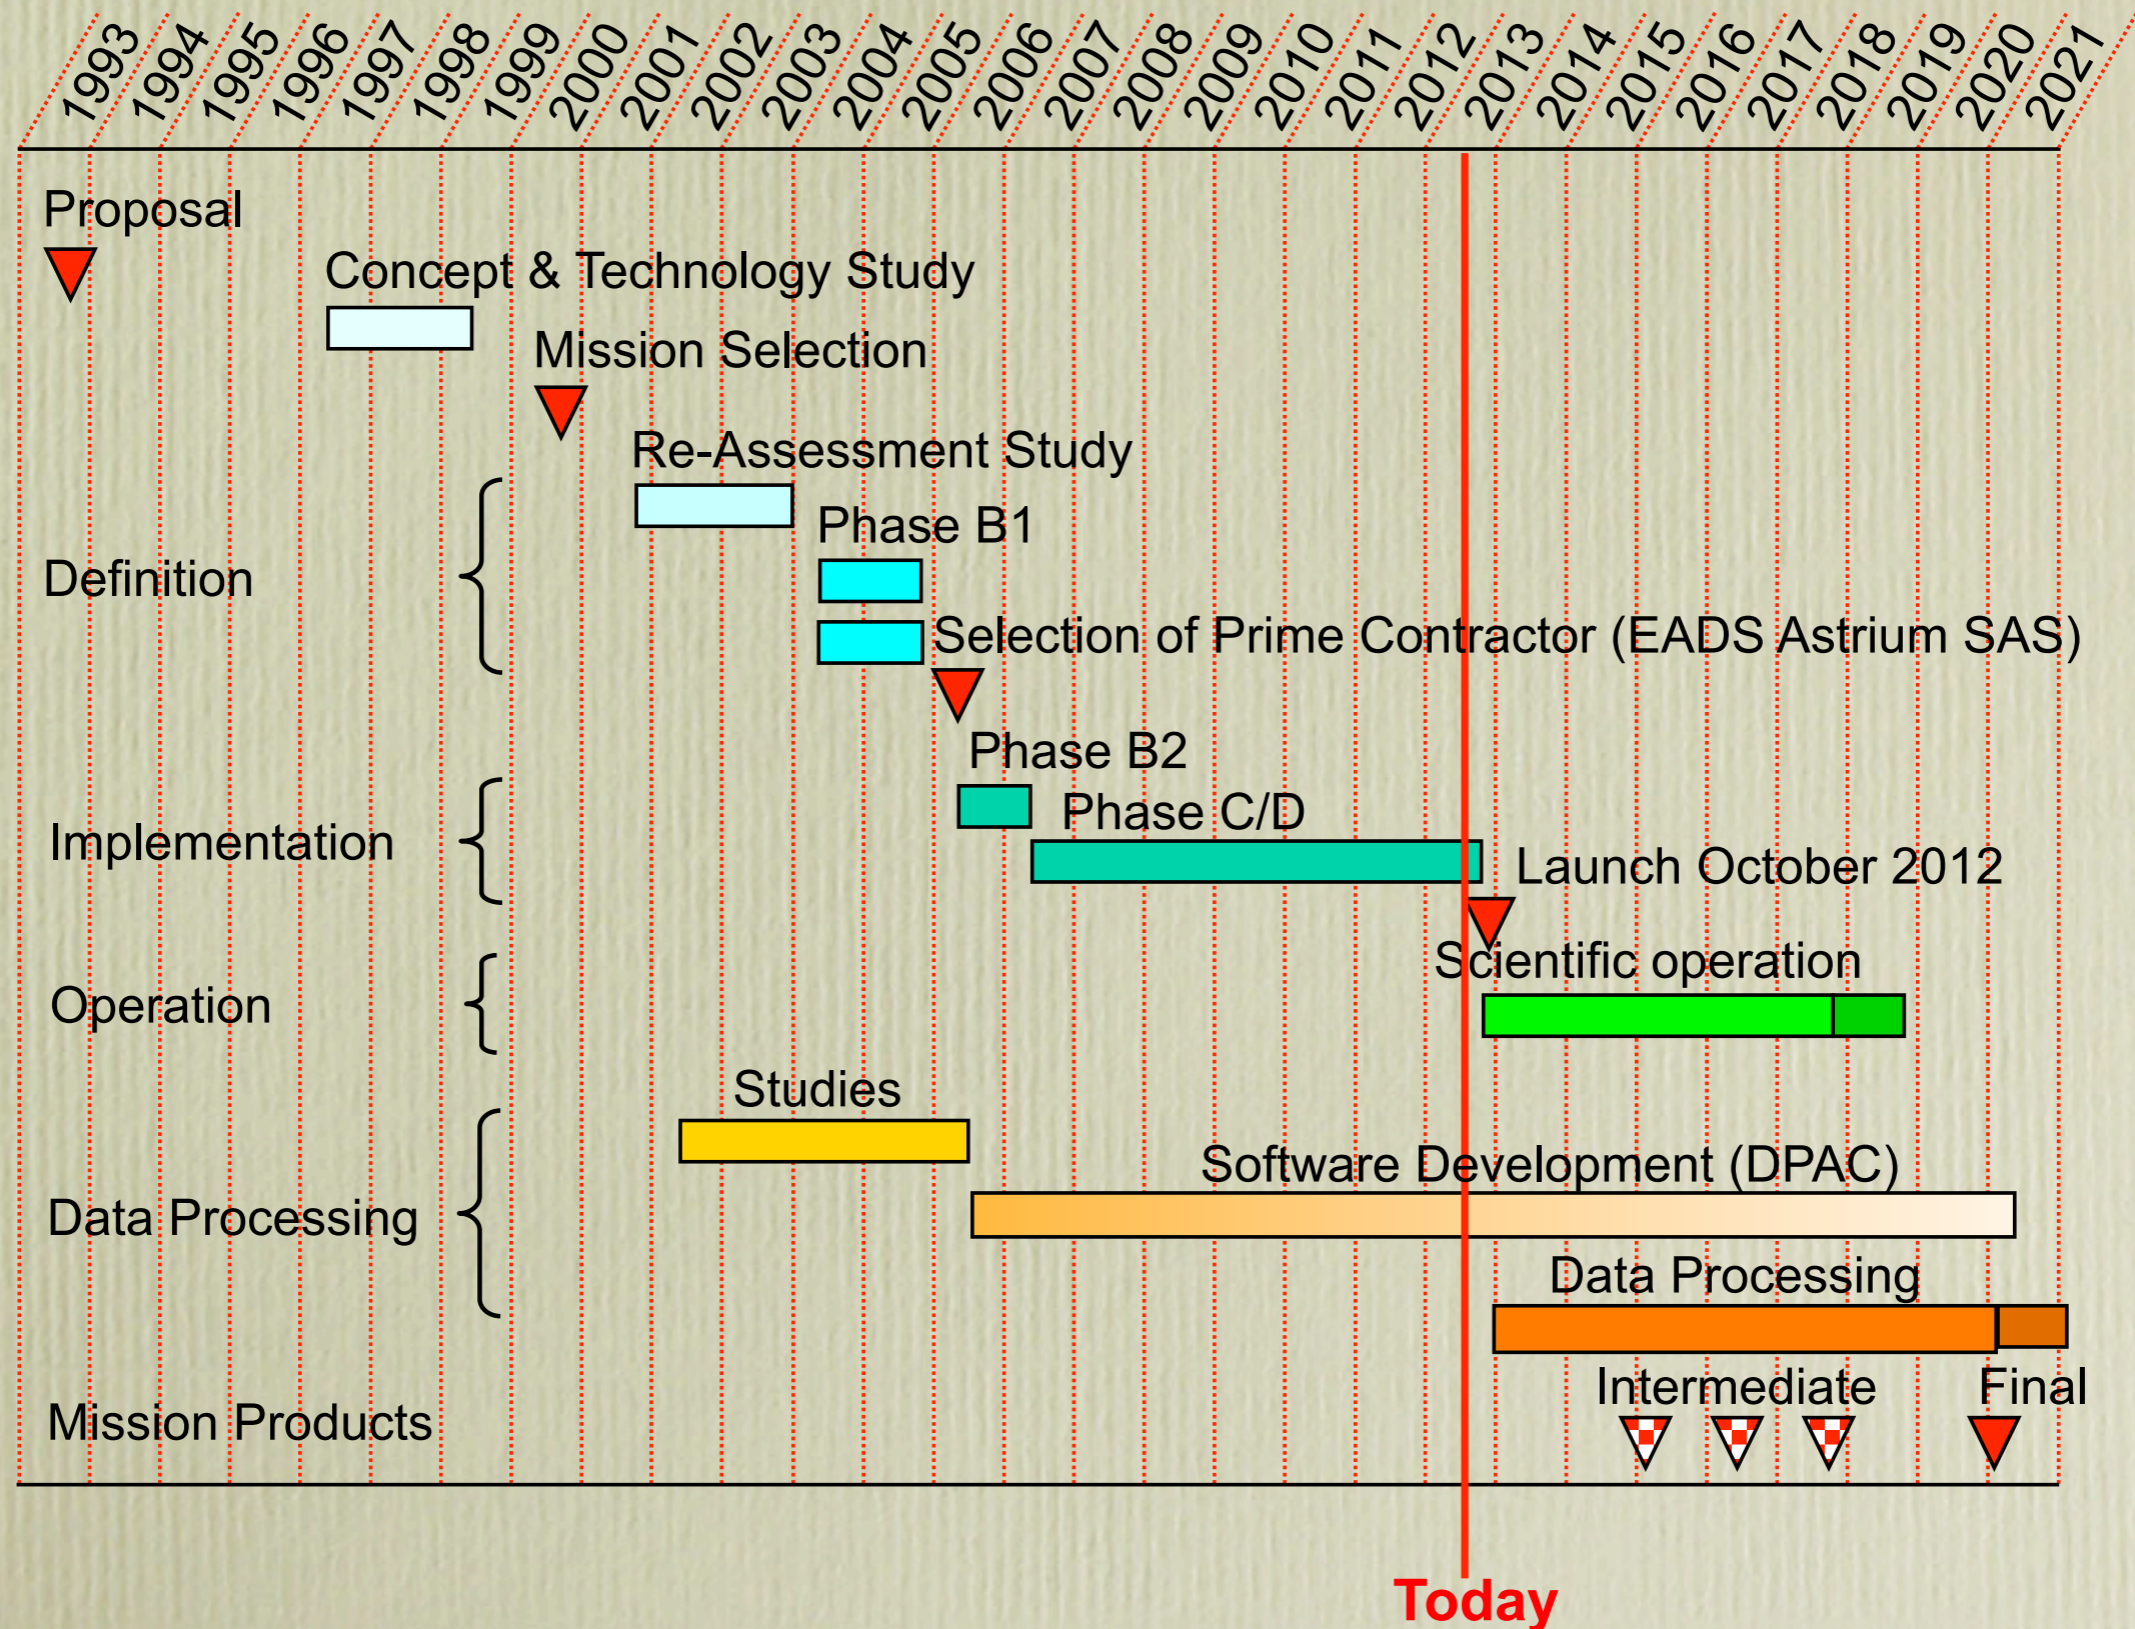

Data Processing - the DPAC

DPAC membership as of January 2013

Schedule

National participation

History

- Started in 2006 (industry started before) just in time for the DPAC AO response
- Emails circulated, meeting organised
- Broad range of interests: several sub-fields of astronomy, optical engineering, data acquisition and storing, artificial intelligence
- Original participants (DPAC): ~12 from SIM, INETI, UNINOVA, U. Coimbra, CICGE, CAUP, CAAUL, + Holos, Critical Software
- Now (DPAC, Sci. exploration): ~12 from SIM, UNINOVA, CICGE, CAAUL, U. Coimbra

Funding

- May 2006-Aug 2007 funding from Centres, 1 trip from GRICES
- 2007-2011 - PDCTE - 265.000 Eur
- 3 CIÊNCIA contracts
- 1.5 FCT Postdocs
- 2012-2013 - standard FCT project - 120.000 Eur
- 2014-2016 - FP7 (for specific WP)
- 2014-... ???
- 2010-2015 - Some support from GREAT

Activity - I

- CU₁ - System architecture:
 - Data Base interface and infrastructure. Done
 - Support to national distributed data processing
- CU₂ - Data Simulations:
 - Optical Instrument Model
- CU₃ - Core Processing
 - Reference frame
 - Definition and acquisition of auxiliary data
- CU₄ - Object Processing:
 - Image reconstruction of extended objects

Activity - II

- CU7 - Variability Processing:
 - Quality control (bias estimation)
 - Unsupervised classification
- CU8 - Astrophysical Parameters:
 - Luminosity, Age and Mass determinations.

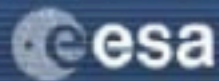

Done

- CU9 - Catalogue Access
 - Visualisation

Activity - III

Gaia has no proprietary data rights

- Science Preparation (GREAT):
 - Memberships of stellar populations
 - Galactic structure. MCMC machinery.
 - Synergies with other surveys
 - Minor solar system bodies
 - GRB (and first stars) detectability
 - Quasars
 - Gaia-ESO
- Organised several DPAC and GREAT meetings

Galaxy detection with Gaia

Detectability of synthetic galaxies

Gaia's main goal is to study our Galaxy and its stellar content and to provide us with their highly accurate astrometric and photometric parameters. However the satellite will also survey many others objects. Especially Gaia will observe a few millions of galaxies and will give us a unique chance to access a whole sky survey of these objects, something that no ground-based survey has ever recorded. The high resolution of Gaia's observations,

Lessons learned

- People come and go: reflects on degree of participation
- Junior technicians are essential
- Panels underestimate the importance of attending the collaboration meetings
- There is no adequate mechanism in Portugal for supporting large teams and/or long term missions
- Decision making process in FCT has an extremely volatile memory and emits contradictory messages to community and evaluators.
- Adaptation, cold blood! Insistence...
